Now accepting applications for positions beginning Fall 2022. Applications received by **February 8th, 2022** will receive full consideration, but we will continue reviewing applications until predoctoral slots are filled.

**About**

Predoctoral trainees will participate in a **two-year training program** integrated with their home doctoral training program, consisting of a combination of core coursework in cognitive neuroscience theories and methods, (including methodological training), and coursework in typical and atypical communication. This program will emphasize the mutual relationship between basic science and outcomes for clinical populations such as dyslexia, aphasia, hearing loss, autism, and others. Trainees will work directly with people with communication disorders.

**Trainee Benefits**

1. Full stipend support for two years at full-time 12-month UConn levels (no teaching requirement), with subsequent support via typical departmental funding
2. Tuition & health insurance covered
3. $800 annual travel allowance
4. Access to a pool of 240 MRI scan hours, as well as ready access to other tools, including EEG/ERP (in and out of scanner), TMS, tDCS, and eye tracking facilities.
5. Available funds for specialized methodological training

**To Apply**

1. Contact a prospective mentor or mentors from our team to assess the degree of fit with the program.
2. Complete the [application form](cnccct.research.uconn.edu).
3. Current CV
4. If you have questions, email charlotte.nelson@uconn.edu.

For more information about the details of the training program, visit the program’s website (cnccct.research.uconn.edu). Note that applicants must be US citizens or green card holders.
